SWAGING FERRULE

The Swaging Ferrule is used to retain an Adjust-A-Jaw[®], Adjust-A-Body[®] or a Fixed Jaw onto a piece of cable.

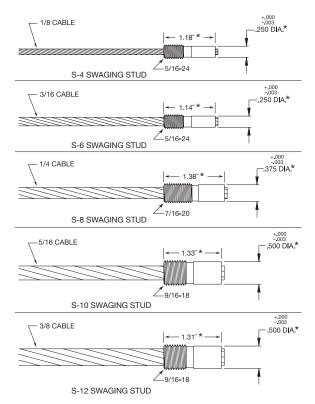

*After swaging

MATERIAL: TYPE 316 STAINLESS STEEL

SWAGING STUD

The Swaging Stud is used in conjunction with an Invisiware[®] receiver or Welded Receiver. This fitting provides a means of tensioning a cable in as small an area as is feasible. The threaded surface of the stud is treated with a moly-based surface treatment that is baked on. This will prevent thread galling and sticking under extreme loads and environments.

*After swaging

MATERIAL: TYPE 316 STAINLESS STEEL
